Practical No. 17

Title: Write a program to create a Business Network using Hyperledger.

Input :

```
class Employee:
    def __init__(self, employee_id, first_name, last_name):
        self.employee_id = employee_id
        self.first_name = first_name
        self.last_name = last_name
    def name(self):
        return self.first_name + " " + self.last_name
class Hardware:

    def __init__(self, hardware_id, name, owner):
        self.hardware_id = hardware_id
        self.name = name
        self.owner = owner

employee1 = Employee("01", "Rutuja", "Sabale")
employee2 = Employee("02", "Diksha", "Varadi")

laptop = Hardware("MAC01", "MacBook Pro 2015", employee1.name())

print("=== HARDWARE ASSETS BUSINESS NETWORK ===")
print("\nParticipants:")
print(employee1.employee_id, employee1.name())
print(employee2.employee_id, employee2.name())
print("\nHardware Asset:")
print("ID:", laptop.hardware_id)
print("Name:", laptop.name)
print("Owner before transaction:", laptop.owner)
print("\nSubmitting Allocate Transaction...")
laptop.owner = employee2.name()
print("Transaction completed successfully!")
print("Owner after transaction:", laptop.owner)
```

Output:

```
PS C:\Users\HP\AppData\Local\Programs\Microsoft VS Code> & C:\Users\HP\AppData\Local\Python\py
thoncore-3.14-64\python.exe c:/Users/HP/Downloads/BCT5.py
=== HARDWARE ASSETS BUSINESS NETWORK ===

Participants:
01 Rutuja Sabale
02 Diksha Varadi

Hardware Asset:
ID: MAC01
Name: MacBook Pro 2015
Owner before transaction: Rutuja Sabale

Submitting Allocate Transaction...
Transaction completed successfully!
Owner after transaction: Diksha Varadi
PS C:\Users\HP\AppData\Local\Programs\Microsoft VS Code>
```
